- Version control : Git/GitHub

PROFILE

Software Developer with 3+ years of experience in PHP, Laravel, MySQL, and full-stack development. Experienced in building ERP modules, AI chatbot integrations using Ollama, database design, business logic, and SQL optimization.

WORK EXPERIENCE

- Logimax technologies**
Implementation engineer & support Specialist
 - Implementation Engineer & Support Specialist with 1.5+ years of experience in software implementation. 2023 - 2024
 - Troubleshooting and technical support. Skilled in resolving customer issues, configuring applications, and ensuring smooth system deployment and operation.
- Logimax technologies**
Software Developer
 - Developed a CodeIgniter 3-based Jewellery ERP covering purchase, inward, outward, inventory, accounts, and reporting. 2024 - Current
 - Implemented stock tracking, business workflows, validations, transactions, and operational reports.

PROJECTS

- NOVAADMIN ERP — Full-Stack Developer**
 - Developed a full-stack ERP application covering master data, inventory, quotations, sales, stock transfers, customers, suppliers, and reporting.
 - Implemented serialized inventory, stock movement, payment/receivable workflows, invoice generation, role-based access, and performance-optimized SQL queries.
- AI CHATBOT — Ollama / Local LLM Integration**
 - Integrated a locally hosted Qwen LLM using Ollama with a custom web-based chatbot application and backend API.
 - Implemented JSON-based communication, conversation context handling, and a scalable approach for persistent chat history and database integration.
- JEWELLERY ERP — CodeIgniter 3 - Official Projects**
 - Developed a complete jewellery-domain ERP application using CodeIgniter 3, covering purchase, inward, outward, inventory, accounts, and reporting modules.
 - Implemented business workflows, transaction management, stock tracking, accounting operations, validations, and database-driven reports for jewellery operations.
- STARSHIP VOYAGER'S — Tourism Management System**
 - Developed a web-based tourism management system for managing tour packages, customer bookings, and related tourism operations.
 - Implemented responsive user interfaces, database-driven workflows, booking functionality, validations, and backend business logic using PHP and MySQL.
